

February 26, 2008

Dear Dr. Robbins:

As you are aware, my son Robby is autistic and I do believe this was caused by the thimerosal (mercury preservative) in his vaccines. Since uncovering this knowledge about mercury and its effects on the body, my husband and I had you remove all the mercury fillings from our mouths.

Prior to the mercury removal, my health was in decline and I was diagnosed with an under-active thyroid. My TSH levels were at 11 and weight was 170 lbs causing me not to feel well at all. I also have a multi-nodular goiter on my thyroid.

My last ultrasound in 2008 revealed the goiter has become smaller! Furthermore, my TSH levels are now under 5 and I have lost 20 lbs. When I first came to you my mercury levels were one of the highest in your office and now I am mercury-free. I firmly believe the mercury in my mouth was causing much of my sickness. My overall health has improved and thyroid symptoms have been diminished without using higher dosages of thyroid medication – the standard way of making a person feel better. I am currently on the lowest dosage of thyroid meds and believe I can remain there due to the removal of mercury from my mouth.

Thanks to you and your team of professionals, I have removed a toxic substance from my body. I have more energy and feel great. Feel free to provide my contact information to anybody who has questions.

Best Regards,

Trish des Groseilliers
