## Dr. Donald Robbins ★★★★★

By Kathie T.

Dr. Robbins was great. Mercury and flouride free office and he spent a lot of time with me. Unfortunately I need a lot of work. My previous dentist wasn't a very good dentist and even the composite filling I have will need to be removed. The tooth that is bothering me has three cracks in it along with an old nasty pitted amalgam filling. It's gross! He took a reading of the mercury vapor in my mouth at rest and after chewing and it was eye opening

They gave me a whole folder with information about the work I need done. Including color pictures of the teeth that need work, a detailed explanation of how their office deals with insurance claims, a detailed sheet about the supplements I will need to take in advance of having the amalgam removed from my mouth to help my body chelate any exposure, and most importantly a detailed treatment plan with full disclosure of all costs, the diagnostic codes, the teeth affected, etc, etc. It was very clearly presented in a really super helpful manner. Nothing hidden and nice easy to read presentation. I've never seen anything quite like it from a medical professional. They even told me what the time estimates are for the work itself. If I try to get it done in as few sessions as possible I'm looking at one 2 hour session, one 2 hour 40 minute session, and one 1 hour 10 minute session.

Highly recommended!
